

How to run searches with boolean operators?

For example, if you need to find people who work as software sales/business development manager/VP/director/head and have experience in B2B you can type into the title field the following boolean search string: (sales OR "business development") AND (Manager OR VP OR Director OR Head). The phrase "business development" is put into quotation marks because we need to get results with the exact phrase. Additionally, type software AND B2B into the keywords field
